

FOIA 2015-037 Hopkins

Data Request: I am a second year PhD student at the Uniformed Services University of the Health Sciences. I am conducting dissertational works on polycystic ovary syndrome (PCOS)-ICD-9: 256.4 and fatigue -ICD-9: 780.7 in a military population. I am attempting to characterize the burden of PCOS and fatigue on the Tricare military health system. I am in need of information regarding the number of office visits for PCOS as well as the number of diagnoses for fatigue in a 1 year time frame (most recent year available i.e. 2013-2014). Your assistance with this matter is greatly appreciated.

1. The count of CAPER encounters with the PCOS diagnosis code ICD-9: 256.4 broken down by active duty dependent numbers
2. The count of the number of times the fatigue (ICD-9: 780.7) diagnosis code is seen in SIDR and CAPER. Also hoping to have a breakdown between active duty and dependent numbers

Source: MHS Data Repository (MDR)
- Comprehensive Ambulatory/Provider Encounter Record
- Patient-Level Standard Inpatient Data Record data

Notes: 780.7 is an inactive code, providing 780.71 and 780.79 instead
780.71 = "Chronic Fatigue Syndrome"
780.79 = "Other Malaise and Fatigue"

Results:

	Outpatient(CAPER)		Inpatient(SIDR)
	PCOS	Fatigue	Fatigue
Active Duty	3,878	42,166	125
Active Duty Dependents	15,059	34,406	134
