

YODA is a data analytics dashboard that allows site owners to observe and manage their content posted on *Inside DHA*, track site storage, assess user engagement and much more. YODA tracks clicks and views of the pages and documents hosted on the Online Base of Information Widely Accessible Over Network servers.

Developed by the Web & Mobile Technology Program Management Office, YODA's customizable dashboards enables users to easily access tools and reports tailored to their needs. They can also view data in real-time and pull current information and reports. These features help content managers identify outdated materials that may require small updates, removal, or replacement, ensuring the entire agency has the most up-to-date information possible.

Key Features

- Modern, intuitive design developed with users in mind
- Depicts aggregated data in the form of custom reports and dashboards
- Includes subsite Global Search Directory
- Users can go paperless by viewing reports and documents online

Key Benefits

- Generates historical reports using date and size ranges
- Reduces administrative burden via self-service actions
- Supplies flexible platform and customizable features that adapts to end user needs
- Allows transparency of operations including traffic and site growth

YODA is managed by the
Solution Delivery Division
Web & Mobile Technology Program
Management Office.
